The logo - real artwork

The decided logo = Option 3 mark + Option 4 wordmark (original options page: appendix, p.5). Below is the ACTUAL artwork, cropped from our brand guidelines - trace these plates pixel-for-pixel. RECREATE the logo from these plates as a finished production SVG, best quality you can - do not wait for designer files. Build it as one reusable SVG symbol so it can still be swapped in one change if official exports ever replace it.

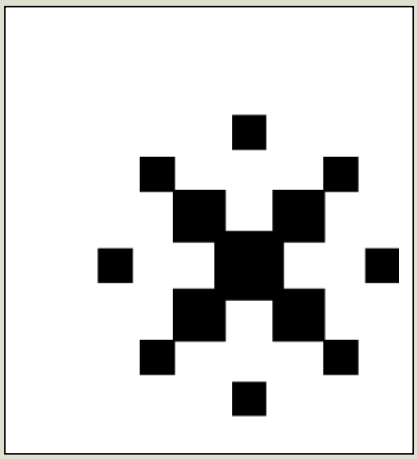

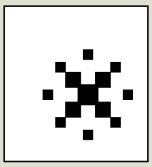

PLATE 1 - THE MARK (Option 3), enlarged

THE MARK AT SMALL SIZE

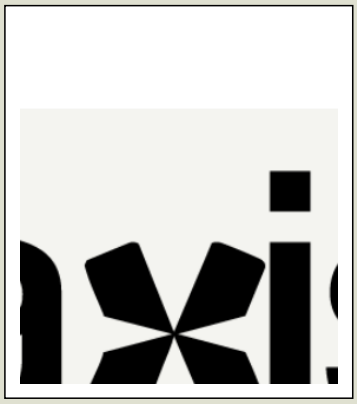

PLATE 2 - THE STAR-X, enlarged

PLATE 3 - THE WORDMARK (Option 4), full

THE MARK - a pixel starburst

One solid centre square; four full unit squares on the diagonals touching it, forming the X; ringed by 8 smaller satellite squares - 4 on the axes (N, S, E, W) and 4 on the diagonals, one step out. Geometry is exactly as plated. Known failures: corner squares with no centre mass reads as a dice / QR tile; satellites too small or too far makes it sparse and wrong.

THE WORDMARK - "Praxis Studio", bold grotesk (Option 4)

The x in "Praxis" is a chunky 4-petal star: thick wedge petals, the same height and weight as a normal x, on the baseline, tight to its neighbours - a letter, not a symbol. If it reads as a diamond, a sparkle, or "Pra-is", it is wrong (see Plate 2).

LOCKUP & COLOURWAYS

Mark left, wordmark right, mark height = wordmark height. Black on Bone/white; reversed Bone on black/Gunmetal; contrasting palette colourways per the guidelines are allowed for graphic use. The star-x alone is our asterisk/bullet motif, in the service star colours.

Colours - exact

Bone #DFE0D0

Page background. The light of the site. - BLACK text

Bright Snow #FFFFFF

Cards and clean contrast surfaces. - BLACK text

Black #000000

Text, logo, dark panels, footer. - BONE text

Inchworm #B1FA63

THE accent: highlight blocks, buttons, stars, OPEN dot. - BLACK text on it

Gunmetal #243837

Contained dark only: galleries, closing sections. - BONE text

Orange #FE7733

SPARK only - inside pixel graphics and work imagery. - never a UI fill

Pale Violet #B2A1FF

SPARK only - inside pixel graphics and work imagery. - never a UI fill

American Silver #D1D1D1

Hairlines, muted labels, meta text.

RULES: light heroes always. Maximum TWO accents on any screen (Inchworm counts as one; a spark counts as the second). Orange and Violet never fill buttons, bars or backgrounds - they live inside pixel art and project images. If a colour is not on this page, it does not go on the site.

STAR COLOURS BY SERVICE (accordion + bullets): Strategy & consulting = Orange - Brand & creative = Inchworm - Web & digital = Pale Violet - Campaigns & media = Bright Snow.

Typography

WORKHORSE - Helvetica Neue (fallback: Helvetica, Arial)

Theory made real.

Headlines are bold grotesk, tight tracking, huge scale. Body is regular Helvetica, short lines, no filler. Service names and project titles are ALWAYS grotesk - never serif, never pixel.

PIXEL LABELS - Handjet (free, SIL OFL, Google Fonts; TTF in assets)

DESIGN STUDIO - EST. 2026 - THE TRIFECTA - OPEN

BRANDING / UIUX / MOTION / SEO

Handjet is for small labels, tags, kickers and the word pills - the pixel voice of the brand. Never sentences, never navigation paragraphs, never body copy.

THE SERIF - one display word only

A serif may appear as exactly ONE display word inside a big headline (a word like "real." set in italic serif against the grotesk). Nowhere else: no serif subheads, titles or body. CHOOSE the serif yourself - one that pairs with Helvetica Neue - and use it consistently. It is a decision to make in the build, not a question to ask.

System & signatures

LAYOUT RHYTHM (from the reference): floating translucent pill header - light hero - dark contained panels for services + galleries - rounded everything - hairline rules in Silver - giant Bone wordmark on the black footer.

SIGNATURE 1 - the pixel snake: a trail of pixels crosses the hero dragging word pills (BRANDING / UIUX / MOTION / SEO).

SIGNATURE 2 - pixel behaviour: project images assemble from chunky pixels as they scroll in; the hero headline breaks back into pixels as it scrolls away. One or two moments, tasteful - never a gimmick everywhere.

SIGNATURE 3 - the trifecta: "The people behind the work" - HAMZA / LAIBA / SHAHZAIB as giant names. No titles, no designations, anywhere on the site.

PIXEL GRAPHICS (from the guidelines): pixel elements are graphics, not text - big or not at all. Sparkle/star motifs welcome. Photos stay natural, no heavy filters.

VOICE: direct, confident, short sentences. "Theory made real." is the tagline. The studio is new and says so with pride - stats consistent with the site itself (3 people / 16 projects / 4 service areas).

PORTFOLIO PRESENTATION: the portfolio is generated for launch and presented as the studio's work - derived client names, client logos, brand colours, imagery and testimonials, all part of the site's world. NO caveats, labels or disclaimers anywhere. The site goes live on this portfolio as-is.

NEVER: dark-first pages - orange UI fills - serif body or titles - pixel font as body - stock-photo imagery - other companies or products of the founders (this studio stands alone).

APPENDIX

Original logo options - guidelines p.2

All four options as supplied. CHOSEN: Option 3 mark + Option 4 wordmark. Options 1 and 2 are NOT used.

1 - LOGO

Logo options - Hamza to choose

All four options, as supplied. Pick one and build with it everywhere.

Option 1 - Plain wordmark. Bold grotesque, normal x, no separate mark.

Option 2 - Pixel X starburst mark + wordmark with a diamond / bowtie x.

Option 3 - Pixel X starburst mark + wordmark with a normal x.

Option 4 - Wordmark with a 4-petal star / asterisk x. No separate mark.

Notes for whichever you pick: keep clear space around it, never retype it, and test it at 16px before using it as a favicon.
